

# ICT-Jobs in Clarity Techwork

## Introduction

ICT stands for information and communication technology. It is a broad, dynamic field of technologies used to manage and process data carefully and facilitate seamless communication across a variety of digital platforms. ICT stands for information and communication technology, which is essentially made up of a wide range of components, from the visible, such as computers and servers, to the invisible, such as intricate networks, high-end software, and electronic systems. Together, these components enable information to be supported at every stage of its lifecycle—from initial collection to processing, storage, transmission, and eventual retrieval.

There are many ICT job fields that can be explored at clarity techworks. The Clarity Techworks ICT job overview offers insight into the wide range of employment options in the Information and Communication Technology (ICT) sector at this specific organisation. Software development, system administration, data analysis, information security, and technical support are just a few of the roles that Clarity Techworks, a technology-focused company, offers. Experts working on cutting-edge projects at Clarity Techworks contribute to the creation of novel technological solutions. ICT jobs can be found at entry-level and advanced levels, and they involve developing and implementing technological solutions, maintaining IT infrastructure, and conducting research and development. Clarity Techworks' workforce comprises essential roles like system administrators, software developers, and security analysts.

- Skills include problem-solving and meticulous attention to detail.

### QA Testing Analyst:

- Job Scope – Testing, identifying bugs, and bug reporting using Confluence and Jira.
- Skills include analytical thinking and effective time management.

### Reflection

One of the most inspiring sentences I heard from the talk given by Mr Yee Soon Tuck, the CTO of Clarity Techworks, was that we are already behind the technology curve when we wake up every day. This means that we have to constantly update ourselves with the latest trends and innovations in the technology field, and never stop learning new things. He underlined the importance of learning new skills and competencies in view of the reality that machine learning and artificial intelligence are changing how we communicate with data and technology. Additionally, he reminded us that companies prefer candidates with more than just technical knowledge when hiring for technology positions, so a degree or certificate is not always a guarantee of success. He went on to say that the computer company puts highly on "soft skills" like creativity, problem-solving, collaboration, and communication. He suggested that we improve these abilities by taking part in activities that push us to our limits and teach us something new about ourselves and our careers.

### API Developer

- Job Scope – Producing APIs, troubleshooting, and providing solutions using VS Code, Sourcetree, and Bitbucket.
- Skills include creativity and critical thinking.

## Summary

In summary, this talk let us gain many knowledges in the field of technology and information system. The overview of ICT jobs in Clarity Techworks SDN BHD let us to have an idea about the job scope, technology used and work skill needed of each job such as android developer, UI/UX designer, QA testing analyst, API developer, web developer and chief technology officer. Therefore, our group will pay more effort in order to become person that work in Clarity Techwork which are very awesome in the field of ICT.
